price list **2020**

General information

We reserve the right to make technical changes. Changes resulting from product improvements, do not constitute grounds for complaint. Special designs are possible. Forms, dimensions, surfaces and prices are available on request.

Deviations from models shown or described are reserved.

Important notes / typical properties of materials and applications

Imprints in the cover can be caused by pressure, body heat and moisture. They are not accepted as reason for complaint. Their characteristics are influenced by the model, cover material and upholstery technique and are characteristics of the respective design. They therefore do not represent a reduction in quality.

In addition, due to the typical influences during the nesting of the products, pressure marks can occur in the upholstery. These are application-related, a result from the typology and do not represent reduction in quality. In comparison to stationary used products, increased scratches and abrasion on the aluminium parts can occur, this due to the friction of the parts against each other when nesting and being moved together in the stack. Corresponding scratches and patina are their extent depending on the handling and are not accepted as a reason for complaint. We point out that the version with polished aluminium surface is particularly sensitive to scratches. The coated surface is the more resistant version.

Leather is a natural product. Each leather hide is unique and unmistakable. Insect bites, scars or chafe marks tell the life stories of the material and are therefore not recognized as defect or ground for complaint.

Wood also is a natural product. For our table tops we only use particularly carefully selected Birch plywood panels of highest quality. Typical characteristics of our table edge are small knots, which may appear as darker spots. They are signs of natural growth and can not be avoided when the layers are inserted into the pressing tool and later milled out during processing. The spots are occasionally visible on the edge and will not be accepted as a complaint. The edges are protected with inlet base and colourless wax.

In spite of careful selection of our cover materials and laminates, in rare cases with re-ordered batches slight colour deviations can occur. These are due to the production processes of our suppliers and will not be accepted as grounds for complaint.

Note on dimensions

The seat height is measured under load. The dimensions are approximate, as soft materials in the loaded condition cannot be measured with millimetre accuracy.

Sales prices for the specialized trade: These are non-binding recommended net retail prices.

design: Andreas Störiko

moin **action-chair**

Instructions regarding the function

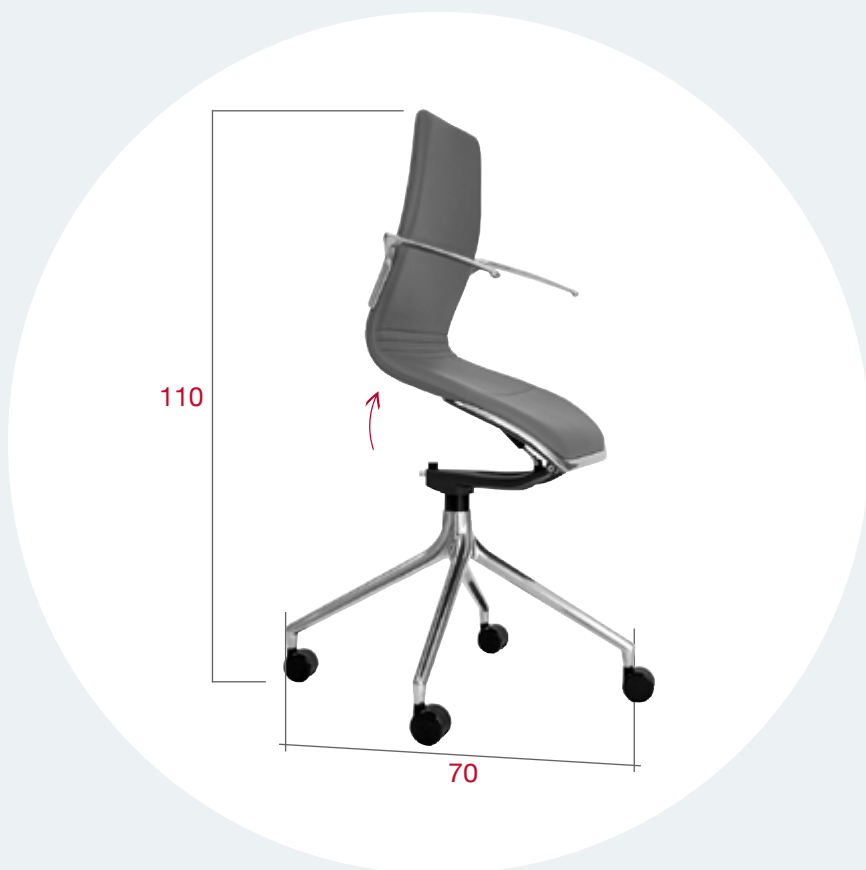

After lifting the shell it remains in a position at an angle of about 30° and is held up by gas springs. An infinite number of chairs can now be nested in a linear fashion and moved as a stack. Naturally, smaller packages of chairs are easier to maneuver than larger ones. To sit down, press the shell down against the initial counter-force of the gas springs.

Weight

The heaviest version in leather with armrests weighs 10.6 KG.

Materials

The frame is completely made of cast aluminium. The moulded wooden arm-chair shells are made of beech plywood.

Optional armrests

Armrests are optionally available with matching surface finishes and can also be retrofitted to the upholstered versions.

Surfaces and colours

The frame is available either fully powder coated or polished. The powder-coated version is coated with resistant Tiger powder paint in RAL 7021 with fine matt texture.

In the polished frame version, the V-shaped support located under the seat is always coated black-grey RAL 7021 with fine matt texture, as is the underside of the seat frame. Armrests are always executed with matching surface. The surface of the screws is optically oriented to the frame surface.

The armchair shells are upholstered throughout with classic, elegant full-grain premium semi-aniline ‚Ascot‘ leather from Gmelich. All used Upholstery foams are manufactured without CFCs. Visible shells have an Ash top sheet and are satin matt lacquered.

For the textile versions we primarily use high-quality woolen fabrics and natural fibres from established manufacturers in the industry, e.g. Kvadrat, Camira, Gabriel. Besides our standard fabrics we also gladly test and upholster your individually desired cover for you. The serial fabric selection can be found under:

<https://www.roomtool.com/produkte/moin-action-chair>

Automatic alignment

All **moin** action-chairs are equipped with a patented and maintenance-free alignment mechanism which aligns the shell orthogonally to the frame.

This facilitates manoeuvring and nesting and creates a calm image of the star-bases around the table. When sitting down the mechanic is decoupled and the armchair rotates freely through 360°.

Castors

In the standard version the armchair is equipped with soft allround ‚Move‘ double castors equipped with no-noise pens from Gross and Froehlich in black. All Other Castor surfaces for different floors of the ‚Move‘ collection are available on Request. The castors are delivered with a standard transport protection, which is removed by the customer.

Security

The armchair is currently GS-certified at TÜV Rheinland / LGA Products.

moin **action-tables**

Materials and colours

The steel precision tubes of the ***moin*** action-tables are always matched to the matt Fenix-NTM laminates of the panels. There are four colours to choose from with identical coating on both sides for the table-top: Bianco Kos, Blue Fes, Grigio Londra and Nero Ingo.

The base can be ordered Tiger-powder-coated with fine-matt texture in matching colour throughout or alternatively polished.

ROOMTOOL uses only materials of highest quality for the table tops made from Birch plywood with waxed edges. The latter are haptic pleasantly rounded at the top and bottom. The round table tops are finished with recess for docking or without at the same price. The table top is E1 certified.

A nylon hook under the table allows the hanging of bags or organizing sockets. A hand friendly expander rubber band helps to quickly connect and adjust the tables during assembly until the rollers are locked.

Castors

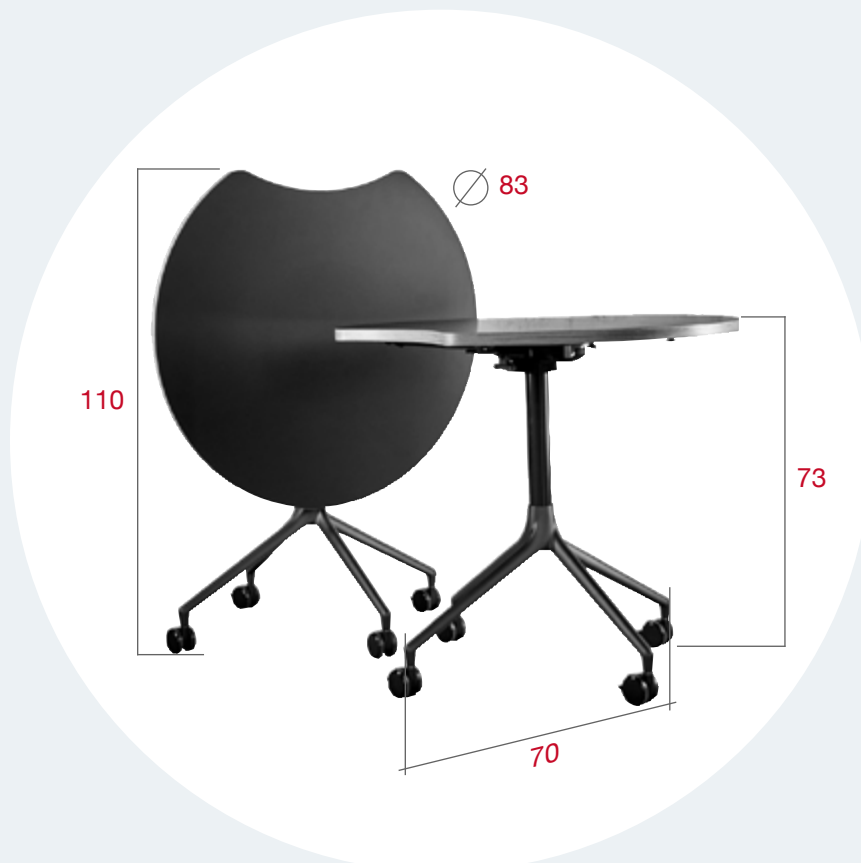

In the standard version the armchair is equipped with soft allround ‚Move‘ double castors equipped with no-noise pen from Gross and Froehlich in black. All four castors have Delta parking-brakes. Special variants are available on request.

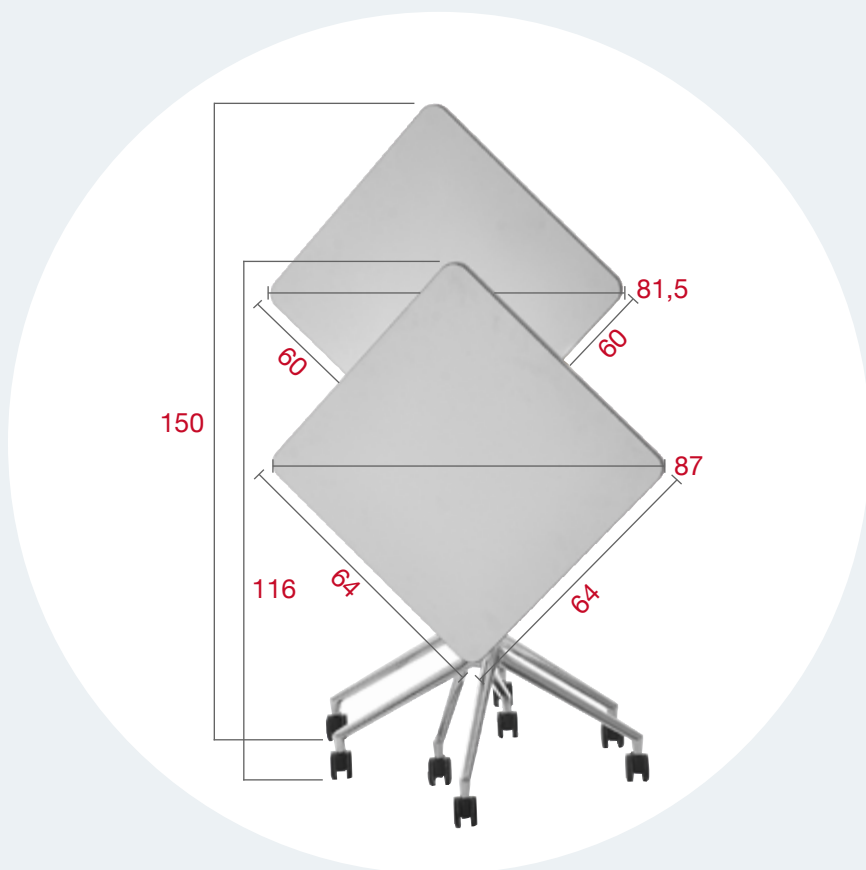

Extras

The standing-height pedestal tables are equipped as standard with fine adjustment of the fourth wheel. They are equipped with a knurled screw to achieve optimal stability and to avoid any possible wobble. Optionally, the tube can be ordered with cable feed-through at a neutral price.

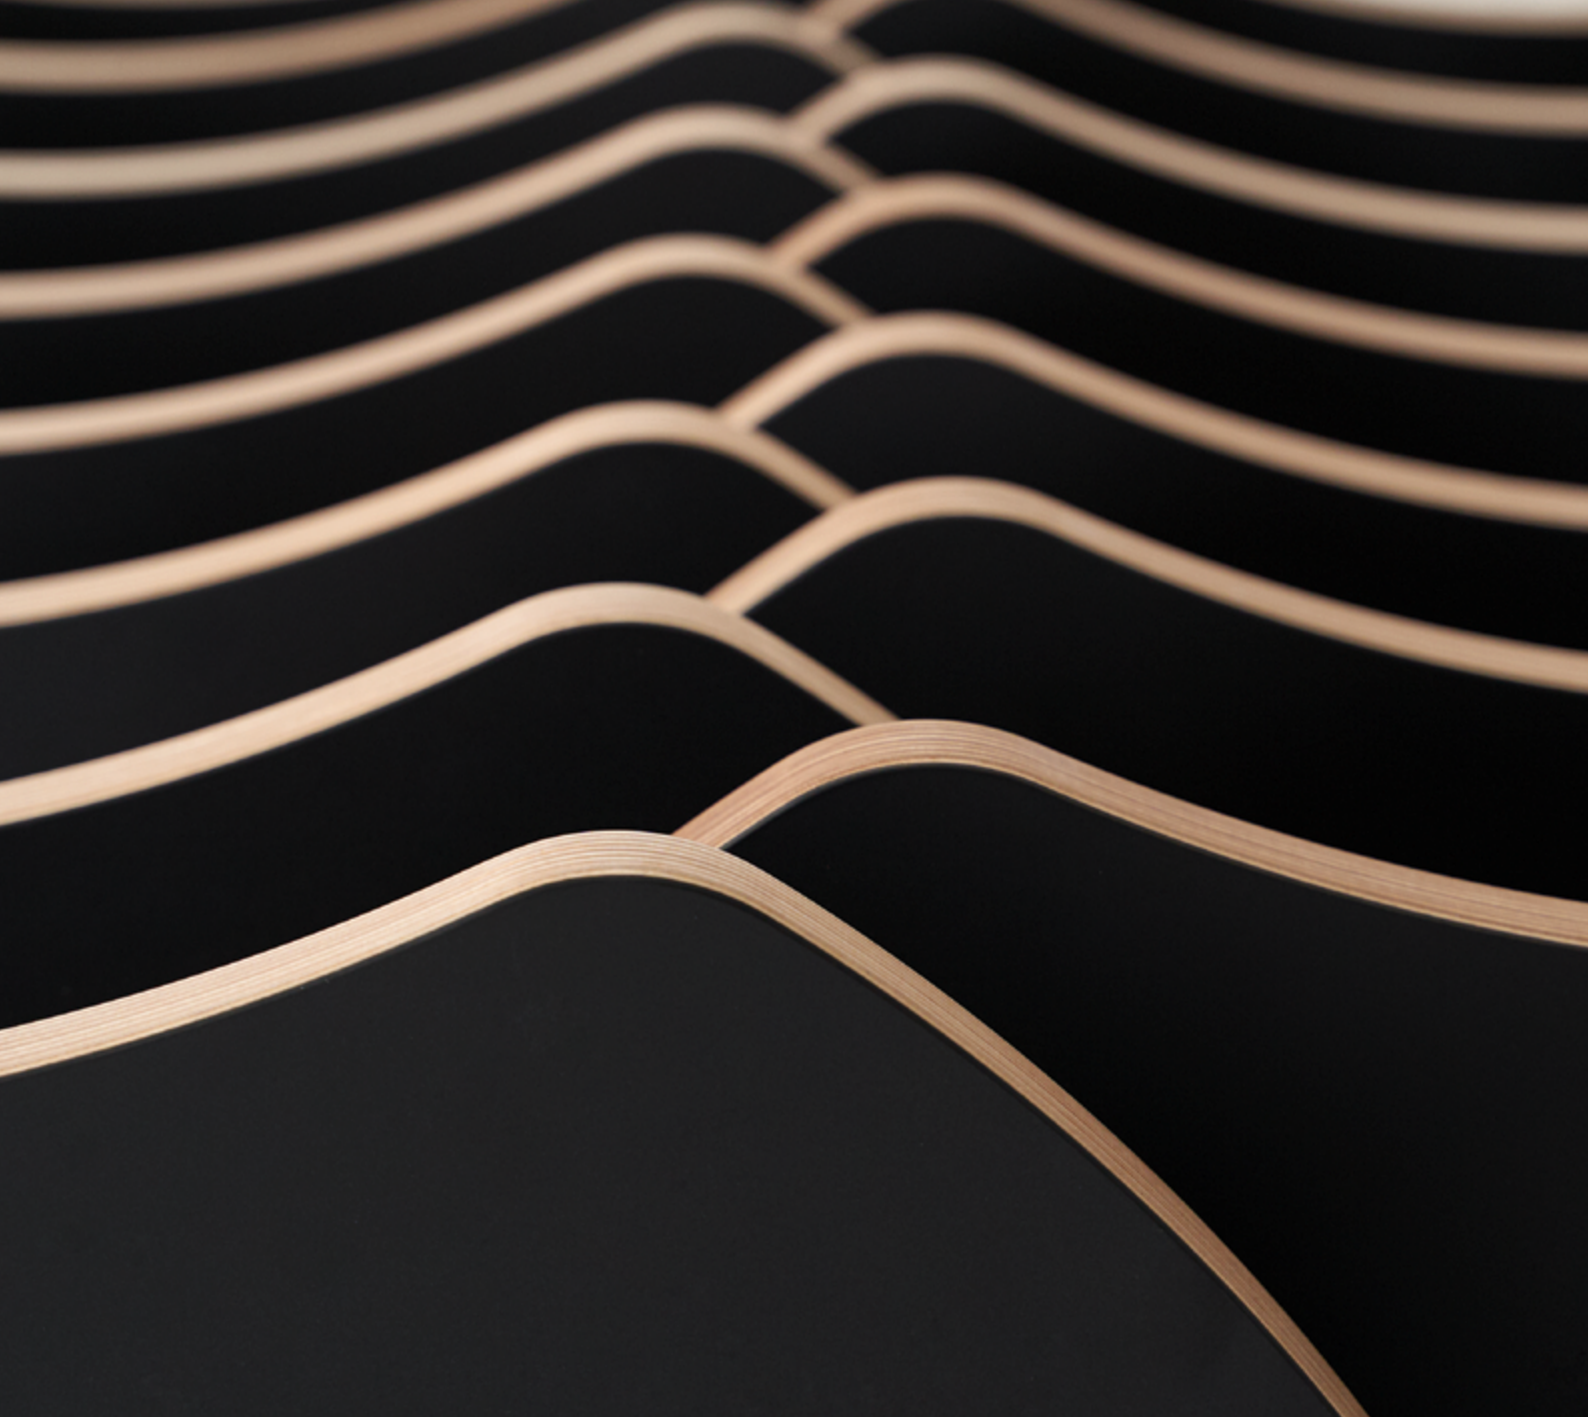

Security

The tables are currently GS-certified by TÜV Rheinland / LGA Products.

moin **event clothes-rack**

The ***moin*** event clothes-rack on call is the ideal way to hang up jackets, coats, hats, umbrellas and bags. In storage condition they can be nested to save space.

Materials, surfaces and colours

The star-base, and upper parts are made of cast aluminium are equipped with heavy metal free and resistant Tiger powder coating with fine matte texture or can be ordered with polished surface. The tubes are always powder coated. Colours: signal white, quartz grey, steel blue or black grey. Under the legs stable felt strips are attached for protection against scratching marks when nesting.

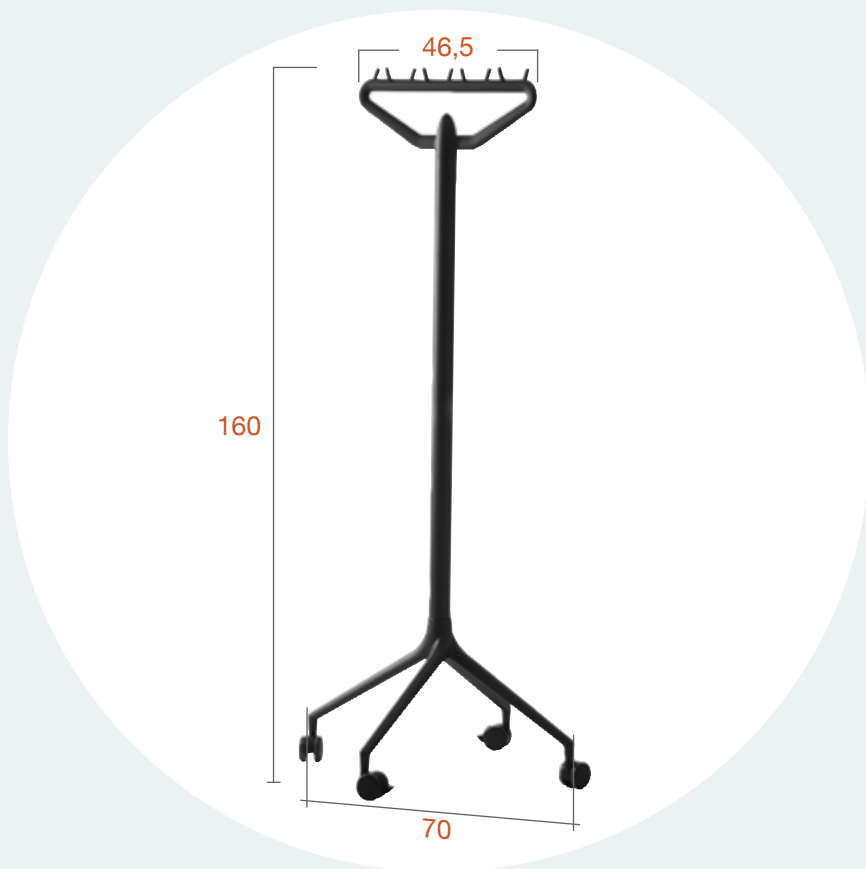

design: Charlotte & Andreas Störiko

Castors

The **moin** event clothes-rack is equipped with soft all-round ,move‘ double wheels with no-noise pens by Gross and Froehlich in black, two of which have a Delta lock. The Castors are deep black.

Special versions are possible on request.

design: Andreas Störiko

moin **action-stool**

Materials, surfaces and colours

The tractor seat-shell made of sheet-steel is upholstered in leather or fabric. On the underside it is covered by a counter shell made of moulded fleece. The stool is equipped with a handle for pulling it up to the table or to lift it over a couple of stairs. The hinged aluminium flange, the gas spring and the release lever for the gas spring are throughout powdercoated grey-black RAL 7021. The trigger for the hinged flange is always kept in red. The shell is rubber-mounted for better comfort and mobility.

The star-base is coated in fine matt RAL 7021 black-grey or optionally polished. Felt strips are fitted under the legs to protect against scratching when nesting. The height-adjustable Stabilus gas spring is coated in matching grey-black in RAL 7021 smooth matt. All other gray-black parts have a fine matt texture. The surface of the screws is zinc-galvanized as shown.

Automatic alignment

All **moin** action-stools are equipped with a maintenance-free automatic alignment mechanism which, when standing up, aligns seat-shell and star-base orthogonally. This makes manoeuvring and threading easier when nesting. Sitting down the mechanics are decoupled and the seat-shell rotates freely around 360°.

Castors

The **moin** action-stool is equipped with soft allround 'Move' double castors equipped with no-noise pen from Gross and Froehlich in black. Special versions are available on request.

Security

The **moin** action-stool is currently GS-certified by TÜV Rheinland / LGA Products.

moin privacy-screen

The roll-up screen can be can be clamped via a rubber-coated set screw above or below the round table. No tools are needed. It serves you as a screen for more privacy on the top of the table or on the bottom. Roll it up or hang for space-saving storage. Cables can be can be passed through recesses.

Materials, surfaces and colours

The 12mm thick membrane of light grey mottled felt fleece is equipped with three small cast aluminium brackets. In the standard version they are powder coated in RAL black-grey fine matt. A rubber covered set screw is fixed to the table top with thumb and index finger for fastening. The felt material acoustically reduces high pitches.

A suitable variant for the square tables is in preparation.

Available June 2020.
