

Press-info (short version)

moin

The ***moin*** action swivelchair with its patented stacking-function allows entirely new furnishing freedoms. Dynamic meetings and work scenarios can now be rendered even more spontaneously. Teambuilding replaces the caretaker. ***moin*** chairs can easily be moved as a stack over the aisle, into the storage room or into the elevator. The space saving is impressive, due to the narrow stacking module.

To this day, mobile, foldable tables are the pioneers for flexible work and dynamic meetings. What about the conference chairs? The classic, communicative swivel-chair has today become a space-consuming obstacle to storage. Vertically stackable chairs, as a conceivable alternative, have to be loaded on carts in a time-consuming and exhausting manner to then be lifted down again at another location.

moin is the new inspiring armchair-typology for maximum interior design dynamics and for truly flexible use of space. We started a family based on this concept: the mobile ***moin*** toolbox consists of small matching stacking tables, standing tables, stools and a mobile event-wardrobe.

Addition / philosophy and material-info (longer version)

Made in Germany: ROOMTOOL products are manufactured with highest quality standards in Schenefeld near Hamburg. All of our suppliers are renowned German companies. We only use the highest quality tested components.

In addition to the "cradle to cradle" approach, ROOMTOOL focuses on maximum durability rather than short-lived circular economy. 'Cradle to collectors item' perhaps hits the core of philosophy. ***moin*** products can be repaired. Wear parts can be replaced after many years. The armchair is both extremely durable under intensive use and is aesthetically long-lasting. The high-quality bases, seat frames, support parts and the armrests with appealing haptics are made of aluminum and either polished or extremely resistantly powder-coated. The molded wooden shell is fully upholstered with classic, elegant full-grain premium semi-aniline leather.

In the textile versions, we rely primarily on high-quality woolen fabrics and natural fibers of established manufacturers in the industry.

The tables are equipped with matt laminates by Fenix (NTM). We offer four colors to choose from with identical coating on both sides. The steel precision-tubes are matching in colour.

The base can be coated in matching color or polished to perfection.

ROOMTOOL only uses only full wood for the tabletops: we use the highest quality birch plywood with naturally waxed edges. ROOMTOOL furniture are equipped with soft, high-quality allround-castors as standard.

Safety and quality control: The armchairs and tables of the ***moïn*** family are currently beeing GS-certified by TÜV Rheinland / LGA Products.

Constant control during our passionate assembly and the close cooperation with our sensitized suppliers guarantees highest quality across our portfolio. We use reusable packaging and reusable transport containers for our parts on the way from the foundry to CNC-machining to surface treatment and final assembly. We strive for a comprehensive, environmentally sound overall strategy.
